Art Unit: 1626

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1, 2, drawn to methods of use, variously classified.
- II. Claims 3-9, drawn to products, variously classified.

The inventions are distinct, each from the other because of the following reasons:

The above groups are identified as general areas. Accordingly, as groups they are independent of distinct as the methods of use of group I may use compounds other than those of group II, the group II compounds are capable of more than one use as note e.g. pages 41 and 42 of the instant specification and separate search considerations are involved. Also, to not restrict this application would impose a burden on its examination.

The above groups themselves are inclusive of patentably distinct subject matter. Accordingly, along with the election of one of the above groups the following action is also taken.

Claims 1 and 3 are generic to a plurality of disclosed patentably distinct species comprising for example, the method of treating plate epithelial carcinoma with (1) the compound of Example 1, (2) the compound of Example 2, (3) the compound of Example 5, etc., the compounds of (4) Example 4, (5) Example 11, (6) Example 36, etc. Applicant is required under 35 U.S.C. 121 to elect a single disclosed species, even though this requirement is traversed.

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the

Art Unit: 1626

case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Upon the election of a single disclosed species, the Examiner for examination along with the elected species will identify a generic concept inclusive of the elected species.

In response to the telephonic restriction requirement applicants' attorney Alan Stempel has elected group II and the species of Example 8 with traverse/ on August 9, 2002. The generic concept as depicted in claim 3 wherein A is optionally substituted dihalo phenyl, R1 is as is, R2 is singularly a monovalent substituent as listed, R3 is as is, R4 and R5 together denote a carbon-carbon bond, B is an optionally substituted carboxy halophenyl group, is identified for examination along with the elected embodiment. The remaining subject matter of claims 3-7 and 9 and the subject matter of claims 1, 2 and 8 stands withdrawn from further consideration under 37 CFR 1.142 (b) as constituting other patentably distinct inventions.

The withdrawn subject matter of claims 3-7 and 9 is properly restricted as said subject matter differs in structure and element from the elected subject matter so as to be patentably distinct therefrom, i.e. a reference which anticipated but the elected subject matter would not even render obvious the withdrawn subject matter and the fields of search are not co-extensive.

Accordingly, the claims are drawn to more than a single invention and restriction as has been required is proper 37 CFR 1.142(a).

Claims 3-7 and 9 are rejected under 35 USC 102(b) as being anticipated by Lennox et al (WO 99/07669, published 18 February 1999). The instantly claimed subject matter is directed to certain benzoic acid compounds and pharmaceutical composition. The reference discloses compounds (and their pharmaceutical compositions), which are anticipatory. In the reference note, e.g. compounds represented by formula (I) page 3 and pages 15-17 and compositions pages 18-19. Note particularly the specific compounds on page 13, e.g. lines 9-14 and 19-24.
